

FISHEYE COMPACT

35MM CAMERA WITH A BUILT-IN FISHEYE LENS!

“Hold on tight. Imagine everything above, below, and around you streaming through your eyes and compacting into a nice and compact little ball. Think about your best friend's nose being vacuum-sucked into your lens, all the while their eyes and forehead are stretched back. Visualise yourself bowled over by the devastating colours that only fine glass can deliver. The world's first Fisheye camera is here and waiting to swim into your life.”

OVERVIEW:

The Fisheye Compact sees a sweeping 170-degree view – capturing everything into a compact circular image and uses normal 35mm film that can be processed anywhere.

Huge depth of field renders both the foreground and background in complete focus. Its premium glass lens offers bright colors and knockout contrast. It has a built-in electronic flash for use day or night.

The fisheye camera is very light. There aren't a lot of buttons or gadgets to mess with on the camera, so from the time you get it to the time you are ready to take your first shot is no more than a minute or two.

FEATURES:

170-degree field of view: an enormous field of view takes in half of the world around you and compacts it into a tight circular image. Barrel distortions twist and bend your subjects around the edges, stretch them towards and away from your lens, and converge their lines towards the centre.

SPECIFICATIONS:

Size: 4.25" (10.5cm) x 2.5" (6cm) x 2.5" (6cm)

Film Format: 35mm (colour negative, slide, b&w) Film not included.

Field of Vision: 170 degrees

Approximate focal length: 10mm

Fixed Aperture: f/8

Fixed Speed: 1/100

Electronic Flash: powered by one "AA" battery

Extreme close-up potential: Get right up to their face, and watch their nose get sucked into your lens while their ears and forehead slides backwards. Sharp, beautiful pictures are possible from even the closest quarters.

Huge depth of field: Super-wide-angle images like the ones spat out by the Fisheye come with a wonderful bonus: focused sharpness from the front to the rear of your image. Each fisheye image shows massive depth of field, so your subject and background will be nice and crispy clear.

Built-in electronic flash: Whenever you need him, this bright little hombre is ready to light up and fire a solid burst of white. Your Fisheye pleasure is no longer limited to daylight hours.

Forget the Viewfinder: Because it doesn't work anyway. With the Fisheye's massive field of view, it sees much more than any simple viewfinder or even your own eyes can see. The Fisheye truly invites you to "shoot from the hip" and capture everything from the Earth to the heavens in the process
